

Improved machinability  
steels for high cutting speeds

## MECAMAX®AV STEELS

Improved machinability steels specifically designed to **increase the productivity** and/or to **reduce the machining costs** in high speed cutting operations. The MECAMAX®AV technology does not have a detrimental effect on the mechanical properties of the steel.

## APPLICATION

- Specifically designed for **high speed cutting operations** (high speed turning, high speed milling...).

## ADVANTAGES

Tool wear reduction	Applicable to all the steel grades
Productivity increase and/or savings in cutting tools	Case hardening, quench and tempering, microalloyed... steels
